

CoastAdapt Training

CoastAdapt is a comprehensive online hub of information and tools that decision-makers can use to plan coastal adaptation, learn from others, find guidance on all aspects of coastal adaptation and step through the adaptation process from start to finish.

NCCARF is building a community of experienced CoastAdapt users who are able to support colleagues as they begin their adaptation journey. We invite you to our upcoming training session to explore in detail some of CoastAdapt's more specialised tools.

The training will:

give you more insight and hands-on experience with the C-CADS framework

help you to use the risk assessment guidance

show you how to tailor the communication material for your community

At the workshop

- We welcome anyone with an interest in climate change adaptation. There are no prerequisites, although we assume some prior knowledge of coastal management.
- The workshop will work through a risk assessment process and associated community engagement. NCCARF's coastal and communication experts will assist you to use and explore the wide range of guidance material on CoastAdapt.
- There is no charge for the half day training; lunch and refreshments will be provided.

Prior to the workshop

- To get most from the workshop we recommend you read through the C-CADS material, community engagement information manual and first pass risk assessment information.
- You will be sent a Recommended Reading Kit to read prior to the training.
- Bring your own device—a laptop computer or tablet—to the workshop: a mobile phone will not be sufficient.

What will I get out of this?

- Following the training we encourage you to share your expertise of CoastAdapt with other users.
- Handouts with training notes and material to support any training exercises.
- A USB stick containing slide presentations to help you share information with colleagues.
- A Certificate of Attendance on completion.
- You may also be eligible to claim continuing professional development (CPD) points for professional organizations like EIANZ, Engineers Australia, or the Planning Institute of Australia.

Join us for lunch at 12 noon. Training runs from 1:00pm-4:30pm on 1 June, 2017 at the WALGA Boardroom, ONE70, LV1, 170 Railway Parade, West Leederville.

Please RSVP to Marilee Campbell at marilee.campbell@griffith.edu.au and indicate any dietary restrictions.
